

INDEX

- abductive reasoning 35, 39-40, 50, 68-69, 129, 303
- aggradation, modelling of 238-239
- allometry 192, 395, 408, 425
- alluvial fans, dryland 191-212
 - analogue modelling of 243-244
 - in Death Valley 200-209
 - numerical modelling of 343, 351
- alluvial architecture,
 - Froude-scale modelling of 239-242
- analogy 66-67, 129, 259, 264
- analytical solutions, models 286
- anomalies 28, 30, 31, 93, 129, 365, 371, 373
- Anthropic Principle 80
- applied science versus basic science 132-136

- background information 25-27, 28, 30, 33, 35, 36, 37, 40, 43-44, 46, 48, 51
- base level changes, analogue models of 243
- boot-strapping method 29
- boundary conditions 175, 180, 182-186, 188, 224, 242, 258, 270, 271, 274, 275, 291, 292, 299, 300, 302, 303, 304, 307, 322, 344-346, 353
- braided rivers, modelling of 155, 184-185, 239-240, 346

- calibration of parameter values 270-271, 292-295, 305-307, 351
- case studies 125, 174, 181, 182, 184, 187, 406
- causal mechanisms 120, 123-124, 173, 182-186, 187, 325
- causality 78, 122-125
- causation 123, 163
- channel dynamics 155, 161, 176-180, 188, 224
- channel initiation 273, 277, 280-281, 283, 285, 286
- Channeled Scablands 27-28, 71, 74
- chaos 17, 79, 155, 164-169, 265, 297, 301, 346
 - and predictability 324-325
 - in geomorphic systems 316-332
- chronometric correlations 197-200
 - for Death-Valley alluvial fans 200-209, 210
 - limitations of 197-200, 209
- classification 33, 119-120, 396, 404, 431
- climatic change
 - and alluvial-fan evolution 192-211
 - and mathematical modelling 270, 274, 289, 300-301
- commensurable scales 151, 162-163
- composite science, defined 417-418
- confluences, river 184, 223, 239-240
- constitutive functions 273, 274, 281-284, 285, 338, 340, 349, 351, 355, 407
 - advective and diffusive processes 282-283, 284-285
 - and thresholds 283-284
 - general versus specific forms 281, 283
- context of discovery
 - versus context of justification 8, 61, 67, 102, 129
- continuity equation 260, 263, 275, 282, 284
- continuum hypothesis 274, 275-277, 284
- critical rationalism 400
- cycle of erosion 93, 149-150, 401, 425, 428, 432, 434
 - and evolutionary theory 36-37, 94, 149, 422-424, 428
 - as a regulative principle 37, 39, 49
 - testability of 37-38, 99-100, 401
- cyclic time 260

- dams, downstream impact of 444-470
- data
 and model updating 344-346, 348, 354-355
 and the search for geomorphic phenomena 50-51
 interpretation of 182
 theory-ladenness of 27-31
 uncertainty of 267
 versus phenomena 26
- data model 128
- dating techniques 154, 193, 198-200, 371
- Davis, W.M. 149-150 2745 275, 394, 396, 403, 409, 422-424, 425, 427-428, 436
 and Kuhn's model of science 93-96
 and outrageous hypotheses 70
 and scientific observation 36-43
 as a fashion dude 107
 criticism of 104, 425
 debate with Ralph Tarr 40-43
 relation to geography and geology 389-391
 view on geography 385
- Death Valley 192-193, 194, 200-211
- deduction 5-6, 389, 428
 and chaos 322
 and W.M. Davis 39
 deductive reasoning, geomorphology 301-304
- design science 135-136
- digital elevation models 181, 184
- dimensional analysis 223, 225-227, 232, 234, 236, 255, 273, 274, 277-281
- discovery 70, 129-130, 436
 and anomalies 30, 365, 417
 and background information 129-130
 logic of 73, 129
- disequilibrium 300, 435
- dissipative systems 303, 318
- divergence time 348, 354
- dogmatism 371
- drainage networks, models of 161-162, 346
- drainage patterns 370
- ecology 355, 359, 363, 393, 416
 as a composite science 417-418, 426-431
 derivative from geology and basic science 418-421
 exemplars in 426-431
- emergent
 behavior 155, 355, 407-408
 rules 338, 342, 351, 355
 variables 340, 355, 356
- empiricism, and models 263, 295, 325, 339
- entropy 317, 323, 407
